# Feevy

Fever Tracker for iPhone and iPad

## About the app

Feevy helps parents to keep track of their kids' fevers, symptoms and medications. It features a beautiful timeline and interactive chart, which make it easy to get a quick overview, but also to explore fever curves in more detail. Feevy syncs between all devices. Both iPhone and iPad are supported, including iPad multitasking (Slide Over and Split View).

## About the developer

I'm **Daniel Rinser**, an independent iOS developer from Potsdam, Germany. I've been developing iOS apps since the advent of the iOS SDK in 2008, mostly as a contractor. Feevy is my second own app, after Milk for Us, a grocery shopping list with focus on productivity.

## The story behind the app

Feevy has been created out of my own need. I have two kids myself (2 and 4 years old), who have fever several times a year, and we would often get confused as to when exactly it started and how it progressed (especially when both were sick at the same time). Has it started 2 or 3 days ago? What was the peak temperature? Is it time to consult the pediatrician yet? And once at the pediatrician's office, it was often hard to recap everything again. Feevy helps us a lot with this – and thanks to the sync feature, we always see the same data, no matter who entered it.
